

Elevation Options Visualization

Elevations option visualization allows your customers to view your most popular combinations (Style A - up to 15 combinations).

OVERVIEW

BHI's elevation options visualization tool helps customers by giving them the freedom to see all the elevation options available and to compare them to one another. This allows home buyers to interact with exterior options and therefore engages them in the process. Buyers are happier with their new home when they see a 3D representation before it's built.

(Style A – up to 15 combinations)

HIGHLIGHTS

- Adds dynamic content to your website
- Allows homebuyer to virtually interact with options
- Brings online customers closer to a decision
